

# Dust-Buster® for the Aggregate Industry

## Dust Suppression Management Systems

### The Most Up-to-Date Dust Suppression Management Available

Dust-Buster dust suppression management systems effectively control dust to achieve clean air compliance in even the most difficult and dusty problem areas.

Dust-Buster is a complete dust suppression management system that includes both advanced design application equipment and efficient, environmentally friendly foaming chemical to solve your most difficult dust problems.

Dust-Buster's low equipment cost and foaming chemical treatment cost is the inexpensive alternative to baghouses, scrubbers and other less efficient methods. Dust-Buster's low equipment cost and foaming chemical treatment cost is the inexpensive alternative to baghouses, scrubbers and other less efficient methods.

*Dust-Buster residual quality maintains effective dust control from crusher all the way to stackout.*

## Foam versus water

Dust-Buster's foaming technology reduces water consumption as much as 90% to minimize screen blinding and equipment maintenance costs resulting from abrasive grit. While water treatment may appear to be the least costly means of dust control, it is often the most expensive when viewed in terms of the number of required application points, amount of water required and plant downtime due to screen blinding and maintenance.

With a phone call to Midwest's Dust-Buster staff, a site survey is initiated to identify problem areas and determine your dust suppression needs. Using the site survey as a basis, a written proposal will be prepared outlining your problem areas and detailing the Dust-Buster equipment and chemical requirements, including all costs, involved for efficient dust control.

With your acceptance of the Dust-Buster proposal, our field service specialists will assist you in coordinating your Dust-Buster equipment installation. Our service staff will train your personnel to operate the system properly and efficiently to obtain optimum dust control.

A total commitment to quality is the primary operating principle of Midwest. Expect to receive the finest in dust suppression products, application equipment and service incorporating the best dust control management program available.

*Dust-Buster  
versus untreated  
systems, reduces  
respirable dust by  
90% or more.*
