Glidex® MC: Application Information

WHEN TO APPLY

Apply Glidex MC track switch agent to the switch plates, throw rods, switch stand and other moveable metal switch components on a routine basis to allow the switch to throw with ease. Depending on the activity of the switch, apply Glidex MC track switch lubricant bi-weekly, monthly or as needed.

SWITCH PREPARATION

Clean or scrape off any packed up grease, graphite or other material so Glidex MC track switch agent can make contact with the metal. Once the switch is cleaned, it will not be necessary to clean the switch again unless another material is put on the components. Additionally, our Ice Free Switch® can be used during the winter season without any additional cleaning.

HOW TO APPLY

Once the switch is clean, brush, pour, or spray Glidex MC track switch agent onto the appropriate components. Spraying is usually the preferred method as it is the easiest and quickest. Put a light even coating on the surfaces to be treated. A typical application will require about 8 to 10 ounces of product. Glidex MC track switch agent can be applied to a wet switch without impairing product performance.

REAPPLICATION

As mentioned previously, a bi-weekly or monthly application should be sufficient unless your lubricating plan calls for more frequent applications. Glidex MC track switch agent can also be applied on an as needed basis.

STORAGE AND HANDLING

Glidex MC track switch agent is shipped in 1-gallon or 5-gallon containers or 55-gallon drums. It is not necessary to store the product inside; however, the container should be capped when not in use. We recommend using the product within one year of purchase.

Companies that use the Glidex series of products:
- AK Steel
- Archer Daniels Midland
- Balfour Beatty
- Bombardier
- Burlington Northern and Santa Fe
- Cedar Rapids and Iowa City Railway
- CN Railway
- CSX Transportation
- Eastman Chemical
- Eli Lilly
- Fritz Rumer Cooke
- Herzog
- Modesto Empire Traction
- New York City Transit Authority
- Pennsylvania Power and Light
- Port of Portland
- Reliant Energy
- Toronto Transit Commission
- Union Pacific Railroad
- US Army Fort Drum
- Watco Companies
- Wheeling and Lake Erie Railroad
- Winchester and Western Railway

**Glidex® MC: Frequently Asked Questions**

**What is Glidex MC?**
Glidex MC is a synthetic fluid comprised of an iso-alkane, specially formulated metal conditioner, and other proprietary ingredients that are very safe for human health and the environment.

**Does Glidex MC wash away?**
No, Glidex MC is extremely water resistant and is not soluble in water.

**How much Glidex MC do you have to use?**
We recommend that you apply a dime-size spot in the center of each plate then throw the switch to spread the material.

**Is Glidex MC conductive?**
Glidex MC is non-conductive. It will not act as an insulator and will not support current to carry electricity.

**Is Glidex MC corrosive?**
Glidex MC is completely non-corrosive.

**Will Glidex MC build up on the switch or pack up?**
No, Glidex MC will not harden or pack up like graphite or petroleum greases.

**Will Glidex MC collect dust, dirt or sand?**
No, Glidex MC will not accumulate dust, dirt or sand. It is ideal in abusive locations such as rail yards, steel mills, coal-fired utilities, etc.

**Do I need to clean the switch before applying?**
We at Midwest recommend cleaning the switch. However, most customers inform us that they generally go right over top of existing materials with no problem.

**How do you apply Glidex MC?**
Glidex MC can be applied by pouring, brushing or spraying as it is very fluid and will spray year-round.

**Is there a summer and winter formula?**
No, Glidex MC is formulated the same year-round so it can be applied in all climates...hot, cold, wet or arid conditions.

**Is Glidex MC bio-degradable?**
Yes, Glidex MC will biodegrade and is acceptable for use in California.

**Will a bug sprayer or weed sprayer work to apply Glidex MC?**
These types of sprayers may work. However, most have a full cone-type twist nozzle for water-like consistency fluids. This would not be ideal for application. Some of the better sprayers (industrial type) have a fan spray nozzle which works well. We do offer the Switch Treator Model 100, which is designed for use with Glidex MC. It is a 3.5-gallon steel tank unit and has an extended wand with a flat fan nozzle tip. Call us for details.

**Will Glidex MC stain hands or work clothes?**
No, Glidex MC is very clean. It is a brownish-red color but will wash off hands with soap and water. Likewise, clothes will not be stained when washed with typical laundry detergents.

**What is the shelf life of Glidex MC?**
As a company policy we normally recommend using the product within a year. But, Glidex MC won’t separate and would be fine beyond the one-year recommendation.

**How often should Glidex MC be applied?**
Your application frequency will vary on the amount of switch activity. High throw count switches may need reapplied every two weeks whereas most would be fine with a monthly application.

**Who uses Glidex?**
The Glidex Series of products is widely used by several Class I Railroads, numerous Short Line Railroads along with Mass Transit Authorities and many industrial facilities that have their own rail service.

**Is Glidex MC diluted before being used?**
No dilution required.

**Is Glidex MC an agricultural base or vegetable oil-type material?**
No, Glidex MC is a synthetic fluid.

**Will Glidex MC attract rodents or wildlife?**
No, unlike vegetable oils, Glidex MC will not attract animal life or rodents.

**What are some possible uses for Glidex MC?**
Glidex MC can be used on lift bridges, car couplers, flop gate mechanisms, and any metal to metal surface to lubricate or reduce friction.

**What other benefits does Glidex MC offer?**
Glidex MC reduces torque required to move metal, has an excellent capillary action to get into tight areas and has been documented to reduce switch throw times.

**How is Glidex MC packaged?**
Glidex MC is supplied in 1-gallon plastic jugs (4 per case), 5-gallon plastic buckets, 55-gallon plastic drums, 275-gallon steel-caged totes, and also in Midwest bulk truckloads of 1,000 gallons and up.
